

```
#include "gridpack/include/gridpack.hpp"  
#include "pf_app.hpp"  
#include "pf_factory.hpp"  
  
// Calling program for powerflow application
```

Basic constructor

```
gridpack::powerflow::PFApp::PFApp(void)  
{  
}
```

Basic destructor

```
gridpack::powerflow::PFApp::~PFApp(void)  
{  
}
```

Enumerated type to distinguish between different configuration file formats. PSS/E version 23 and 33 formats are currently supported.

```
enum Parser{PTI23, PTI33};
```

Execute application. The name of XML-formatted input can be used as an argument to the executable

```
@param argc number of arguments  
 @param argv list of character strings
```

```

void gridpack::powerflow::PFApp::execute(int argc, char** argv)
{
    // Define a communicator on the group of all processors (the world group)
    // and create and instance of a power flow network
    gridpack::parallel::Communicator world;
    boost::shared_ptr<PFNetwork> network(new PFNetwork(world));

    // Read configuration file. If file is not specified when invoking the
    // executable, assume the input file is called "input.xml"
    gridpack::utility::Configuration *config
        = gridpack::utility::Configuration::configuration();
